

Unit 3: Relations, functions, and graphs

Table, Graph, Formula

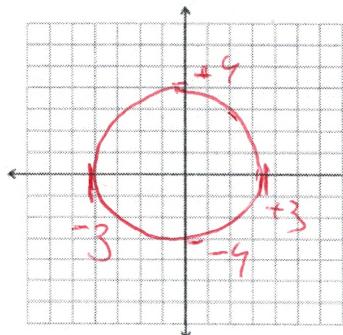

(Chapter 3, page 104)

<input type="checkbox"/>	Relation is set of ordered pairs.	Definition Page 107
	Domain: <u>Possible inputs</u>	
	Range: <u>Possible outputs.</u>	
	---- Examples:	
	$(\text{Monday}, \text{Pizza})$ $(\text{Wednesday}, \text{Tuna})$ $(\text{Tuesday}, \text{Taco})$ $(\text{Wednesday}, \text{Salmon})$	
<input type="checkbox"/>	Graph	Page 110
	Terms to know:	
	---- Cartesian coordinate system; Origin	
	---- Quadrants	
	---- x-axis, y-axis	
	---- Coordinate of a point	
	---- x-coordinate, abscissa ; y-coordinate, ordinate	
	ab'sisa ord'nat	
<input type="checkbox"/>	Function	Page 117
	Relation in which each input has exactly one output.	
	---- <u>Vertical line test</u>	
	One-to-One function	
	Function in which each output originated from exactly one input.	
	---- <u>Horizontal line test</u>	(plot examples in the next table cell)

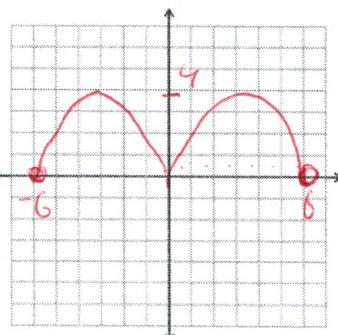

- Plot an example of a relation, a function, and one-to-one function.

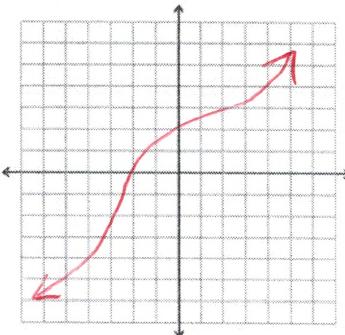

Relation

Function

One-to-one function

Domain: $[-3, 3]$

Range: $[-9, 9]$

Vertical line test: -

Horizontal line test: -

$[-6, 6)$

$[0, 9]$

-

$(-\infty, \infty)$

$(-\infty, \infty)$

✓

- Function composition

$$f(x) = 3x + 5 \quad ; \quad g(x) = x + 2$$

Definition
Page 149

$$f(g(x)) = f(x+2) = 3(x+2) + 5 = \boxed{3x+11}$$

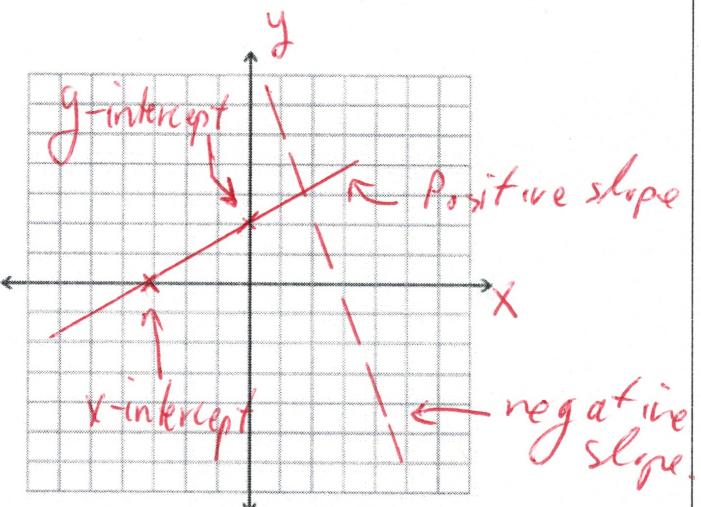

(Hint: $f(\blacksquare) = 3\blacksquare + 5$, and $\blacksquare = x + 2$)

$$g(f(x)) = g(3x+5) = (3x+5) + 2 = \boxed{3x+7}$$

Notation: $f(g(x)) = f \circ g$

Unit 3: Lines

(Chapter 3, page 104)

	Graphs of Lines (Linear equations)	Page 122
<input type="checkbox"/> Graph of a line.	<ul style="list-style-type: none"> ---- General line equation: $y = mx + b$ ---- x-intercept ; y-intercept <u>(indicate on graph)</u> ---- Slope of a line $m = \frac{\text{rise}}{\text{run}}$ ---- Vertical line slope: <u>"∞" undefined</u> ---- Horizontal line slope: <u>0 [e.g.: $y = 5$]</u> ---- Line that goes through the origin <u>$y = mx$ no b</u> ---- Parallel lines $m_1, m_2 : \boxed{m_1 = m_2}$ ---- Perpendicular lines $m_1, m_2 : \boxed{m_1 \cdot m_2 = -1}$ ---- Positive slope, negative slope <u>(indicate on graph)</u> ---- Examples 	Theorem 3-1 Theorems 3-9 and 3-10

	Lines	
<input type="checkbox"/>	<u>Slope-intercept form</u> You are given: $m = \text{slope}$, $y - \text{intercept} = b$ Formula: $y = mx + b$	Theorem 3-7
	<u>Point-slope form</u> You are given: (x_1, y_1) and m Formula: $(y - y_1) = m(x - x_1)$	Theorem 3-5
	<u>Two-point form</u> You are given: (x_1, y_1) and (x_2, y_2) Formula: $(y - y_1) = \frac{(y_2 - y_1)}{(x_2 - x_1)}(x - x_1)$	Theorem 3-6
	<u>Standard form</u> Formula: $Ax + By + C = 0$	Theorem 3-8
<input type="checkbox"/>	<u>Intersection of two lines</u> When their x and y coordinates are the same. $\begin{aligned} \text{Line 1: } & y = 2x + 3 \\ \text{Line 2: } & y = -x + 6 \end{aligned} \quad \left. \begin{array}{l} 2x + 3 = -x + 6 \\ 3x = 3 \\ \boxed{x = 1, y = 5} \end{array} \right\}$
